```java
import java.util.Calendar;
public class Person {

    private String name;
    private int age;
    private Calendar birthday;

    public Person( String name, int age, Calendar birthday ) {
        // ...
    }

    public String getName() {
        return name;
    }

    public void checkAge() {
        age = (Calendar.getInstance().get(Calendar.YEAR)) -
            birthday.get(Calendar.YEAR);
    }

    public int getAge() {
        return age;
    }

    public String getBirthday() {
        return birthday.toString();
    }

    public String toString() {
        return name + " " + getBirthday();
    }
}
```
